## Topic: Cooperative games (core and Shapley value)

VERY IMPORTANT: do not look at the answers until you have made a VERY serious effort to solve the problem. If you turn to the answers to get clues or help, you are wasting a chance to test how well you are prepared for the exams. I will not give you more practice problems later on.

1. Consider the following cooperative game: $\mathrm{N}=\{1,2,3\}$ and

$$
\begin{aligned}

& \mathrm{v}(\{1,2\})=18, \quad \mathrm{v}(\{1,3\})=24, \quad \mathrm{v}(\{2,3\})=16 \\
& \mathrm{v}(\{1,2,3\})=30 .
\end{aligned}
$$

Find the core.
